PROJECTS

MTA ANDROID APP, New York March 2018 – Present

MTA information mobile app using custom formulas and data feeds to provide users with a way of calculating needed balance for trip fares and tracking real-time MTA delays.

- Coded using Java, JavaScript, XML, and outside libraries.
- Led team in designing and planning phases of the app.
- Communicated with team about code, bugs, concerns, features, UI and UX design, and other app functionalities.
- Completed features include a fare calculator, dynamic table of service prices, real-time transportation service statuses of buses, bridges, tunnels, rails, and trains, maps of all transportation services, MTA contact information, user logs saved in an SQLite database, and a user submitted feedback system for bugs and suggestions.

WEB DEVELOPMENT, New York April 2018 – Present

dynamic website that displays ranking of Cryptocurrency and updates every few seconds to display price changes. This project was done to gain experience working with public JSON API data.

- Used jQuery AJAX technique to request data from Coinmarketcap's public JSON API and post it on my website.
- Created custom jQuery function that dynamically updates price changes every few seconds and changes colors based on percent changes.

New York 2017 – Present

Built second front-end website redesigning existing local business's website. Project was done to gain experience in redesigning existing websites, learning new technologies, and improving UI, and UX.

- Used Twitter Bootstrap framework, and jQuery JavaScript library to improve performance, and responsiveness of website.
- Reused existing images, color schemes, and other contents to reduce work time while improving website's aesthetic look.
- Created browser cookie using jQuery and jQuery cookie plugin; was done to track if user received custom pop-up disclaimer.

New York 2017 – Present

Built first front-end website of local business to gain experience of UI, UX, designing, and integrating HTML, CSS, and JavaScript.

- Performed cross browser tests to catch errors on different browsers and different browser versions.
- Performed screen size responsiveness tests for mobile, tablets, and desktop screens.
- Implemented Google Maps API to display location of business using JavaScript.
- Created contact form where users may write messages for inquiries, concerns, or suggestions for the business.
